

ABSTRACT OF THE DISCLOSURE

An image capturing apparatus employs an image sensing unit to use a optical lens module to sense external objects to obtain a corresponding digital image, then employs an image process controlling unit to receive the digital image to perform a digital image process to obtain a digital picture and stores the digital picture into a storage unit. The storage unit transmits the data in the storage unit to a host computer and the host computer uses the I/O unit to send the digital picture and data to the storage unit.
